

**Education:****Ph.D. in Electrical and Computer Engineering**  
University of Southern California (USC)Aug. 2015 — present  
Advisor: Prof. Urbashi Mitra**B.E. in Electronic Engineering and Information Science**  
University of Science and Technology of China (USTC)

Aug. 2011 — Jun. 2015

**Research/Work Experience:****Communication Science Insitute, USC**  
**Graduate Research Assistant**Aug. 2015 — present  
Advisor: Prof. Urbashi Mitra

- *Application of Graph Signal Processing to Reinforcement Learning*
  - Proposed policy sampling and reconstruction algorithms for structured optimal policy in reinforcement learning problems. The proposed algorithms achieved both runtime reduction (80%) and negligible performance loss compared to the classical  $Q$ -learning algorithm.
  - Derived analytical error bounds for the proposed algorithms and showed polynomial error decay rate.
  - Further proposed policy refinement algorithms, which achieved additional 50% error reduction with minor increase in complexity (less than 10% in runtime).
- *Efficient Representation and Policy Optimization for Markov Decision Processes Problems with Large State Space*
  - Derived one optimal subspace design method for reduced dimensional Markov Decision Processes, perfect reconstruction of value functions and optimal policy is guaranteed.
  - Proposed various subspace design methods for reduced dimensional Markov Decision Processes using graph signal processing techniques. One particular method achieved both complexity reduction and perfect reconstruction of the optimal policy.
  - Exploited policy structure to accelerate policy iteration, achieving 50% runtime reduction.
- *Deep Learning for Policy Optimization*
  - Analyzed the property of gradients of the neural network and theoretically showed monotonic property of neural network weights.
  - Proposed smart initialization method for policy gradient using continual learning, 60% error reduction is achieved.

**Adaptive Spectrum and Signal Alignment, Incorporated (ASSIA)**  
**System Engineering Intern**May. 2019 — Aug. 2019  
Technical Manager: Jisung Oh

- *Improvement of Broadband Network Speed Measurement*
  - Implemented software algorithm for broadband and Wi-Fi speed test
  - Optimized on C++ codes for improved performance
  - Conducted comparison with the current flooding algorithm and showed robustness and up to 50% performance improvement of the developed algorithm under heavy network traffic scenario.
- *Multi-AP (Wi-Fi Mesh) Network*
  - Investigation and understanding of WFA (Wi-Fi Alliance) Mesh Standard

**Communication Science Insitute, USC**

Aug. 2019 — Dec. 2019

- *Graduate Teaching Assistant:* EE562 Random Processes in Engineering

**Department of Electronic Engineering and Information Science, USTC**  
**Undergraduate Research Assistant**Jan. 2014 — Oct. 2014  
Advisor: Prof. Wenyi Zhang

- *Impact of Coordinated Transmission on Delay and Energy Efficiency in Wireless Networks*
  - Derived formulas for delay and energy efficiency in non-coordinated transmission and coordinated transmission.
  - Conducted numerical comparisons and analyzed their engineering significance.
  - Demonstrated that networks can strongly benefit from coordinated transmission.

## Courses and Skills:

---

### • Graduate Courses

- Introduction to Computer Networks    ◦ Digital Communication and Coding Systems
- Probability for Electrical and Computer Engineers    ◦ Fundamental Concepts of Analysis
- Information Theory and Compression    ◦ Random Processes in Engineering
- Applied Matrix Analysis    ◦ Stochastic Processes    ◦ Analysis of Algorithms
- Computational Solution of Optimization Problems    ◦ Stochastic Network Optimization
- Wavelets and Graphs for Signal Processing and Machine Learning
- Dynamic Programming and Markov Decision Processes

### • Software skills and Packages

- **Programming and Toolbox**
  - \* Python    \* Matlab    \* C    \* SDR simulink Matlab    \* SQL
- **Others**
  - \* L<sup>A</sup>T<sub>E</sub>X    \* VHDL
